

Environmental policy

Wapro AB delivers innovative solutions for stormwater and sewer systems. Our products are assembled, tested and shipped from the factory in Karlshamn, Sweden.

All Wapro products are designed to protect people and property from flooding and contribute to protecting our environment by minimizing the risk of flooding. Controlling flow and mitigating backflow leads to:

- a reduction of the amount of heavy metals in stormwater runoff from roads to our streams and lakes
- less flooding of homes and other building which reduces the impact of sanitation and destruction of material goods
- the reduction of energy consumption by controlling the flow in stormwater and sewer systems.

Wapro strives to develop products that contribute to increased peace of mind and reduce environmental impact. At the same time, Wapro actively works to reduce any negative impact of our processes may have and increase the positive impact our products have on the environment.

Wapro must in a sensible and exemplary way:

- conduct a structured and systematic environmental work with the aim of constantly improve operations environmentally
- work in a way to prevent pollution
- set an example by complying with environmental legislation, national environmental quality objectives and other requirements that apply to the business
- increase the employees' competence and sense of responsibility in relation to our environmental impact
